ENC 2002 Final Program
and Expo Guide

On the cover: BNFL's new interactive exhibition in the UK – *sparkling reaction* – is energizing the debate about nuclear power. The exhibition opened at the company's Sellafield plant in June and uses state-of-the-art digital technology to transport visitors into a 'virtual world' where they can make decisions on energy policy – and see the impact of their choices! BNFL has given the London Science Museum editorial control of the exhibition to underline its commitment to provoking a balanced and independent debate about nuclear power and electricity generation. Wherever you are in the world, you too can experience *sparkling reaction* via a special interactive website (www.sparkingreaction.info) due to be launched in July.
