Sustainable Future

**10-11 October 2022**

**Řež, Czech Republic**

The eighth triennial international meeting of experts from nuclear power plants with VVER reactors, representatives of regulatory bodies, designers, fuel suppliers, maintenance, and other services providers.

The conference is a forum for exchanging information on the safety, reliability, and economic competitiveness of nuclear power plants with VVER reactors and for exchanging knowledge on the latest trends in this field, as well as a forum for discussion not only service providers for power plants with VVER reactors, but also representatives of research and development, regulatory authorities together with representatives of the Czech government and parliament.

#### Conference topics

- safe and reliable operation
- long term operation and maintenance
- nuclear fuel
- fuel cycle back-end and decommissioning
- R&D, training and education
